Douglas Reinhart
COUNTY ENGINEER

Dick Hellman
Mote & Associates
March 25, 1996

Dear Dick;

As per your request pertaining to flood plain elevations in the village of New Knoxville, SR# 219 bridge (I am assuming you are requesting information about the East bridge, there is one on the West side of town also).

Enclosed is a copy of what plans we have showing some 5-10 yr. flood elevations. These plans were developed by ODOT and can be found in Division 7, Sidney. Hopefully they will have the corresponding calculations for this structure. The County has no records other than this bridge data. When FEMA established the flood plain maps, they did not provide specific elevations of the 100-yr. flood for the maps. That is left up to local engineers, doing the improvements to establish. In most cases, that has been determined when bridges were designed. I hope that ODOT can provide this for you.

Should you wish to run your own data, please contact Doug Crawford, at my map office in the basement of the court house for the watershed and grades that may be available if this ditch were ever petitioned.

Douglas Reinhart, P.E., P.S.
Auglaize County Engineer
