**Flood Plain Determination
12514 SR# 66**

February 3, 2014

The flood plain elevation for the buildings at this parcel is determined by elevations created by Koop Creek which is just to the east of said buildings.

The 100-year flood elevation of the St. Marys River @ Greenville Road is 864.5 while the 100-year flood elevation on the downstream side of the structure under the canal feeder and Koop Creek is 865.0 (note the upstream elevation of this structure is 866.5).

12514 SR# 66 is located between these two point and extrapolating between the two above mentioned known elevations, the 100-year flood elevation for this site is 864.7 (1927 Datum).

Douglas Reinhart, P.E., P.S.
Auglaize County Flood Plain Coordinator
